Room Title: FlareVM: Arsenal of Tools

Link: <https://tryhackme.com/room/flarevmarsenaloftools>

Focus Area: Malware Analysis

Executive Summary

Completed the **FlareVM: Arsenal of Tools** room on TryHackMe. This room introduced FlareVM and static analysis. It included the use of static analysis tools to find hashing information, process information, and TCP connections. This served as a great introduction to how much information static analysis can harvest and allow for more specific investigations during dynamic analysis.

Learning Objective

- Learn about malware analysis tools available in FlareVM
 - Analyze malware using static analysis tools
-

Tools & Technologies Used

Category	Tools/Technologies
Static Analysis	Procmon, PEStudio, Process Explorer
Packet Capture	Wireshark

Walkthrough

Task 1: Introduction

Task 2: This task talks about all the different tools that FlareVM comes equipped with. This includes reverse engineering, decompilers, static and dynamic analysis, forensic, network, file, scripting, and Sysinternals tools. Understanding the tools that FlareVM gives you can help you find quick solutions to the problem or analysis you need.

Task 3: This task goes over the more used tools in FlareVM. This includes Procmon, Process Explorer, HxD, Wireshark, CFF Explorer, PEStudio, and Floss. This task had us open two different files, one in PEStudio and the other in CFF Explorer, it then asked for basic questions regarding file information.

Task 4: This task involved using Wireshark, PEStudio, and Procmon to get information regarding a windows exe malware file and a cobaltstrike exe malware file. Information such as IP connection requests, parent process, and entropy value were asked for.

Task 5: Conclusion
