

**Josh Remington**

**TryHackMe Writeup**

**Date Completed:** June 8, 2026

---

**Room Title:** REMnux: Getting Started

**Link:** <https://tryhackme.com/room/remnuxgettingstarted>

**Focus Area:** Malware Analysis

---

### Executive Summary

Completed the **REMnux: Getting Started** room on TryHackMe. This room introduced REMnux and static analysis. It included file preprocessing, fake internet services, malware object linking, and more. This room provides a slight glimpse of how malware analysis is started.

---

### Learning Objective

- Learn about malware analysis tools available in REMnux
  - Analyze malware and memory images
- 

### Tools & Technologies Used

| Category        | Tools/Technologies                                                   |
|-----------------|----------------------------------------------------------------------|
| Fake Internet   | Inetsim                                                              |
| Object Linking  | Oledump.py                                                           |
| Preprocessing   | strings                                                              |
| Windows Plugins | PsTree, PsList,<br>CmdLine, FileScan,<br>DllList, psScan,<br>Malfind |

---

## Walkthrough

### Task 1: Introduction

### Task 2: Machine Setup

**Task 3:** Use oledump.py to analyze a potentially malicious Excel document. The first file reveals that there can be a VBA script embedded in the file. The VBA script has a PowerShell script execute when the Excel file is opened, which downloads a file from the internet. The goal is to identify how many data streams are in these files.

**Task 4:** In this task, inetsim was used to establish a connection between REMnux and the attackbox. Inetsim is a fake internet services tool used to emulate http(s), DNS, ftp, and more. We change inetsim's configuration for DNS to point to the REMnux ip(do this in REMnux). We then use the attackbox to download a flag.txt document from the REMnux machine, this one actually returns a flag, but any download attempt or internet access attempt not targeting remnux will result in an inetsim fake response.

**Task 5:** This task discusses preprocessing data by using tools such as PsTree, PsList, CmdLine, etc. After running these, we use strings to extract printable ASCII text. This allows us to investigate the system.

### Task 6: Conclusion

---

---

## Screenshots showing room completion

The screenshot shows a user profile for 'remin005' with a rank of 126013, 16 badges, and 88 completed rooms. A red arrow points from the 'Completed rooms' stat to a grid of room cards below. The grid includes rooms like 'Introduction to SIEM', 'Logs Fundamentals', 'Firewall Fundamentals', 'IDS Fundamentals', 'Vulnerability Scanner Overview', 'CyberChef: The Basics', 'CAPA: The Basics', and 'REMnux: Getting Started'.

**Introduction to SIEM**  
Learn the fundamentals of SIEM and explore its features and functionality.  
Easy Free Walkthrough

**Logs Fundamentals**  
Learn what logs are and how to analyze them for effective investigation.  
Easy Premium Walkthrough

**Firewall Fundamentals**  
Learn about firewalls and get hands-on with Windows and Linux built-in firewalls.  
Easy Premium Walkthrough

**IDS Fundamentals**  
Learn the fundamentals of IDS, along with the experience of working with Snort.  
Easy Premium Walkthrough

**Vulnerability Scanner Overview**  
Learn about vulnerability scanners and how they work in a practical scenario.  
Easy Premium Walkthrough

**CyberChef: The Basics**  
This room is an introduction to CyberChef, the Swiss Army knife for cyber security professionals.  
Easy Free Walkthrough

**CAPA: The Basics**  
Learn to use CAPA to identify malicious capabilities.  
Easy Premium Walkthrough

**REMnux: Getting Started**  
Learn how you can use the tools inside the REMnux VM.  
Easy Premium Walkthrough

The screenshot shows the 'REMnux: Getting Started' room completion page. It lists six tasks: Introduction, Machine Access, File Analysis, Fake Network to Aid Analysis, Memory Investigation: Evidence Preprocessing, and Conclusion. At the bottom, there is a recommendation scale from 1 to 10 and a 'Submit now' button.
